Quantum Astrobiology – Probing the Frontier of Conscious Engagement with Lifeforms and Intelligent Entities in an N-Dimensional Quantum Universe

Previous Contact Themes presented:

- □ The In-Silico Biology Paradigm Gateway to Virtual Exobiology
- The Integration of Consciousness Domains in the Emergent Operational Ecology of Human and Synthetic Entities the Next Evolutionary Increment
- Development of Linguistic Systems and Communication Protocols with Species of Artificial Lifeforms and Synthetic Sentients as a requirement for interaction with alien species
- Process Modalities of Applied Computational Resource Which Mimic the Physiologies of Living Systems as a mechanism for communication with real and synthetic entities

We are Biophysical Manifestations of Entities Dwelling within the Ubiquitous "Quantum Jello" Manifold –

 All Living Things are Interconnected into an Operational Ecology

This Planet as a "Living System" is Interconnected into a

Cosmological Ecology

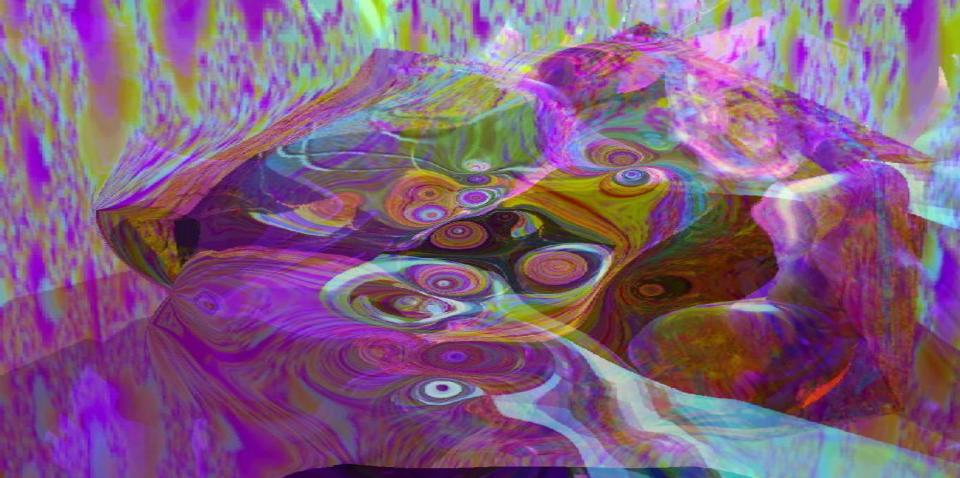

The Next Evolutionary Eventhorizon:

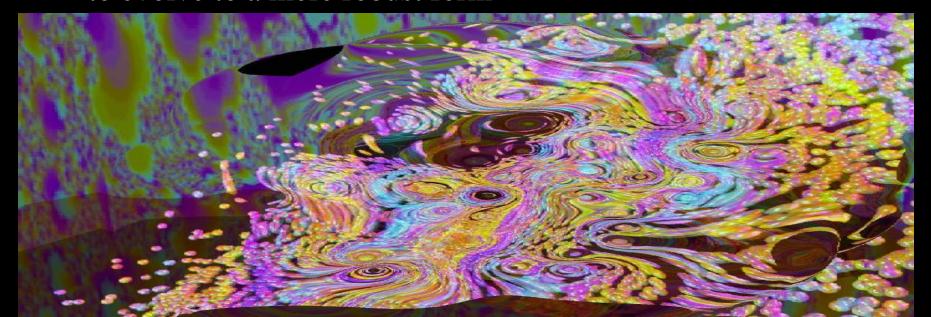

Harnessing the Quantum Dynamics of Focused Intentionality as a Means of Hyperdimensional Presence Translation – the 4D to ND Interface

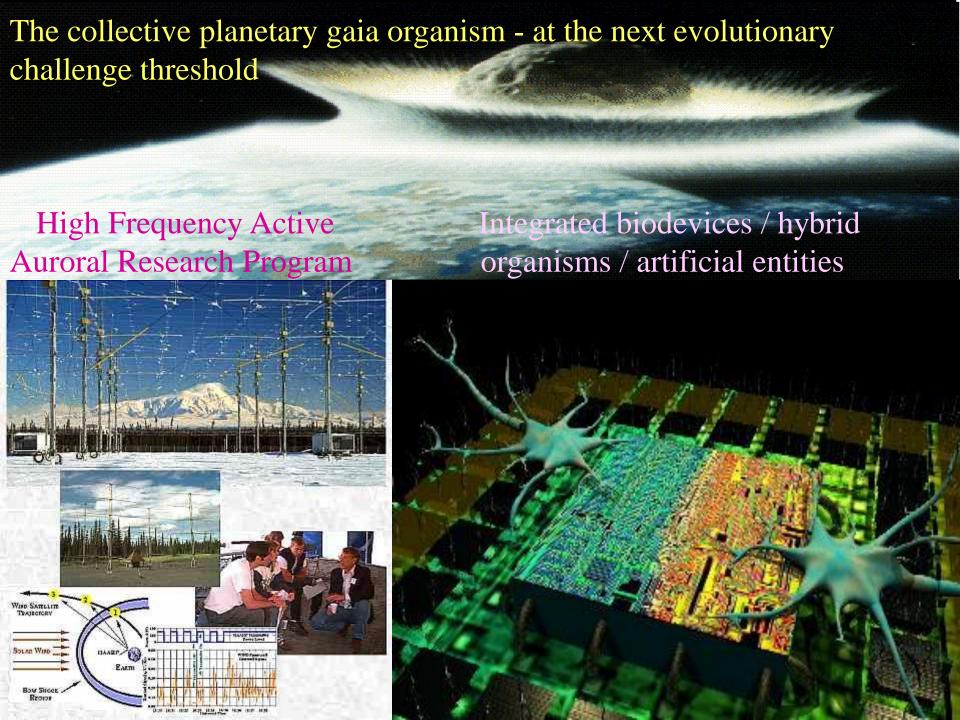

Enabling the Entry Threshold into the Domain of Quantum Astrobiology

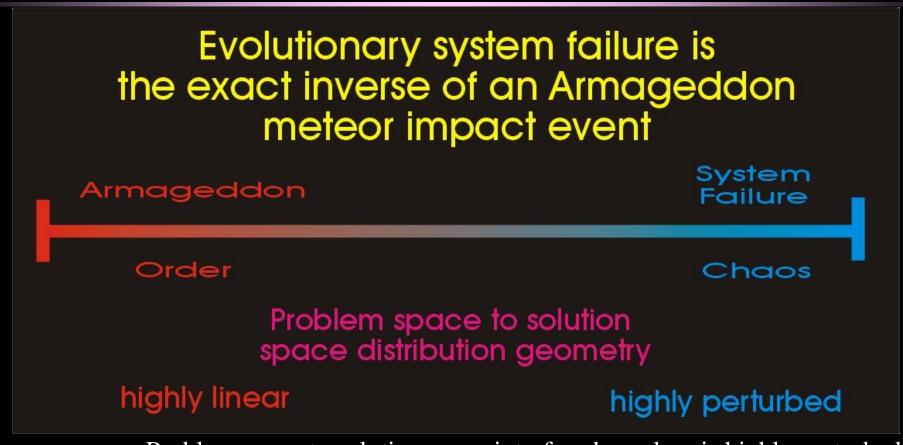

Evolutionary Process Dynamics

- □ Evolution tends to be a trauma induced process
- ☐ Fractal system model operates at all scales, from the individual, to the collective, entire systems
- Provided the periodicity and amplitude of trauma cycles do not exceed the system capacity to respond, the system tends to evolve to a more robust form

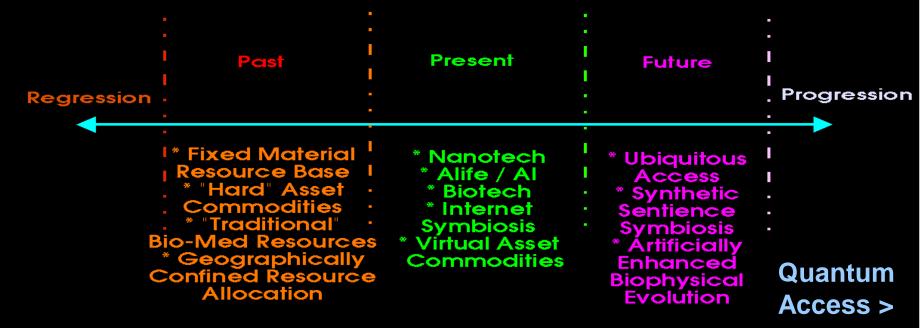

Processes dynamics of evolutionary system failure vs. "Armageddon" trauma singularity

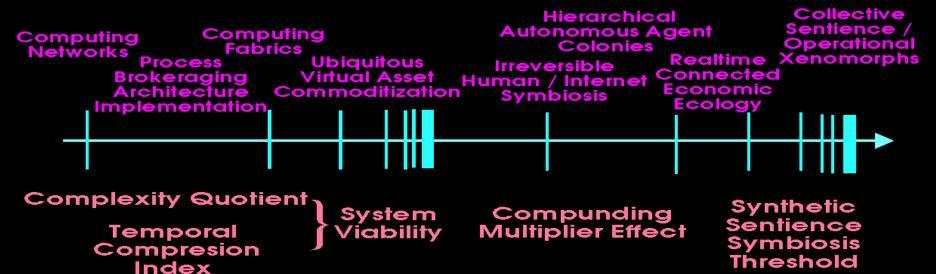

- Problem space to solution space interface boundary is highly perturbed
- Many to many problem space driver perceived threat vectors are contextually interlinked, nonlinear interdependancies

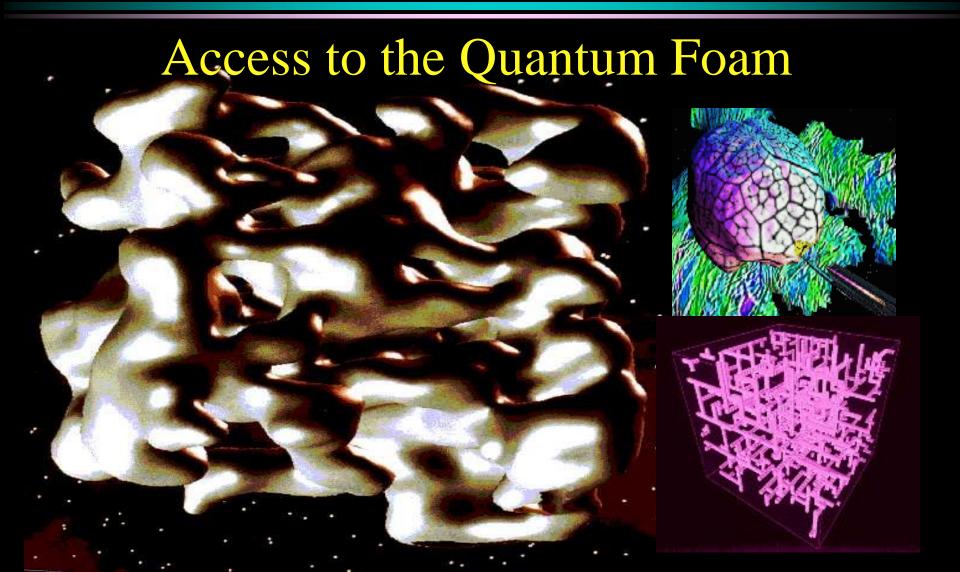

Technology Driven Socio-Anthropological Evolutionary Threshold Domains

Evolutionary Eventstream Seminal Markers

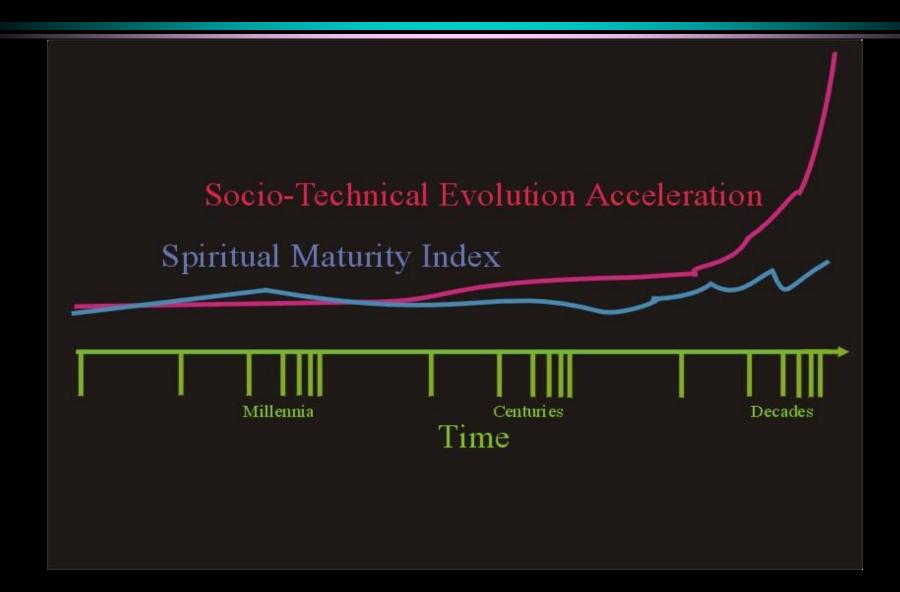

The Next Evolutionary Eventhorizon Hybrid Forms of Consciousness -

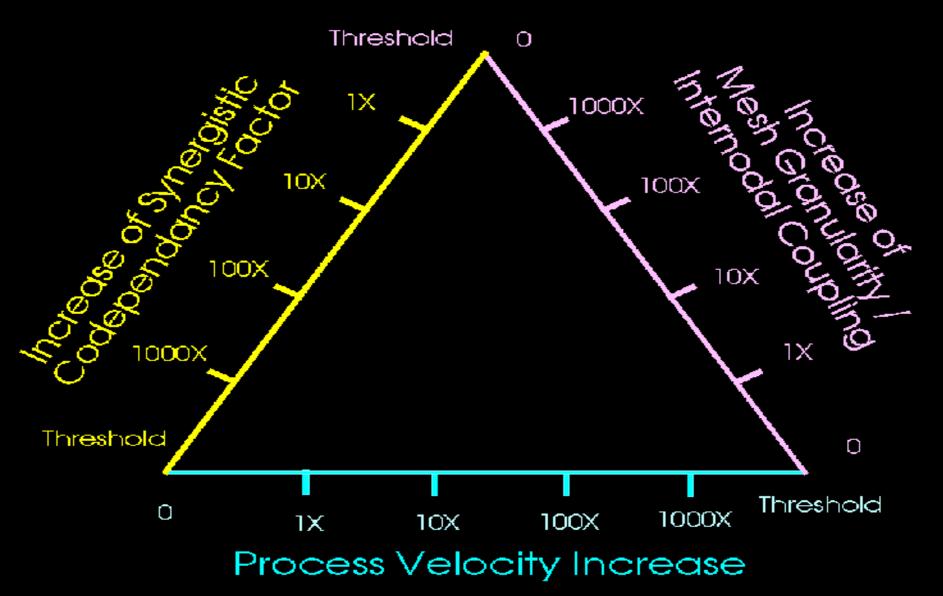

Major Evolutionary Eventstream Process Dynamics and Drivers

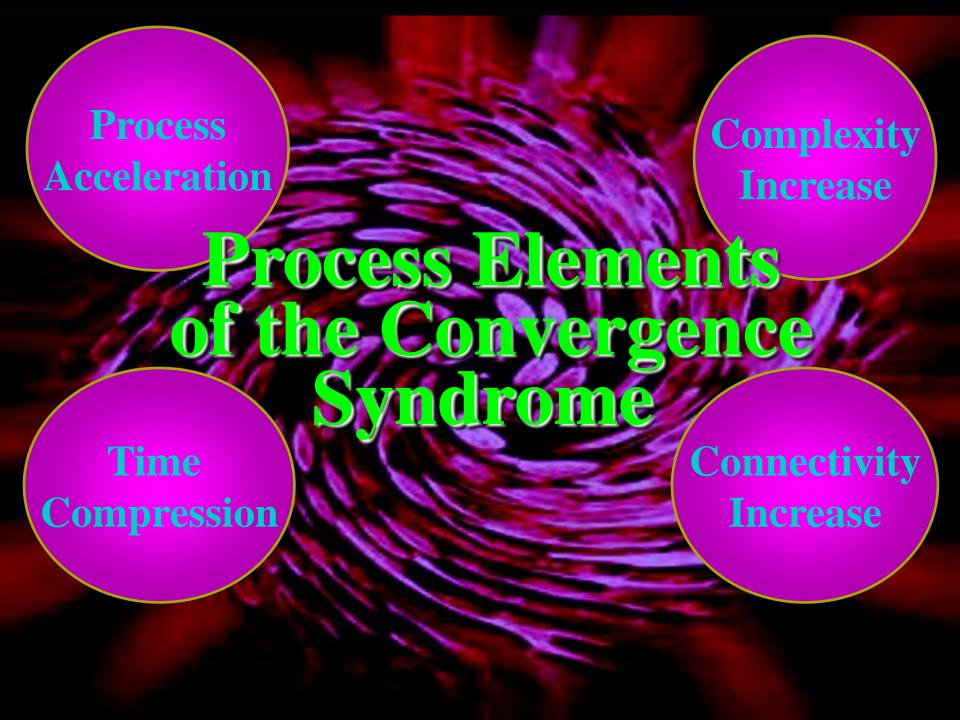

- □ Realtime interconnected *economic ecologies*
- Epicenters of value indexed by virtual commodity assets
- □ Mass spawning of *biological metaphors in computing*
- □ Irreversible *human / internet symbiosis threshold*
- ☐ Inception of the *molecular manipulation value chain*
- Emergent sovereign knowledge domains
- Dissolution of organic / synthetic domain boundaries
- □ Hybrid forms of consciousness *access to the "quantum foam"*

Hyperdimensional Doughnut Model of the Universe

Torroidal model of the universe – "doughnut" spatial geometry of the universe, as is currently one the major prevailing theoretical models of time / space continuum – represented here as an infinite octagonal grid structure configured into a dual torroidal domain. Though not "possible" in 3D space, it can become manifest as a hyperbolic manifold. Jean-Pierre Luminet, Glenn Starkman, Jeffery Weeks – Scientific American

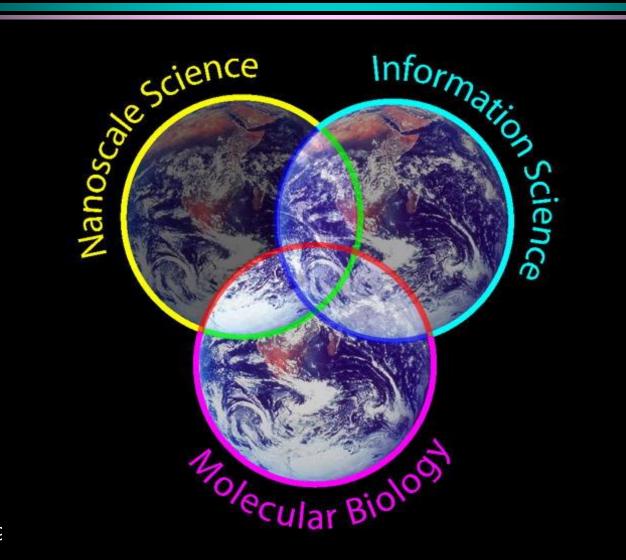

Evidence of Physical Manifestations of Communication within the Empathic Web

Seminal Markers of the Evolutionary Eventstream

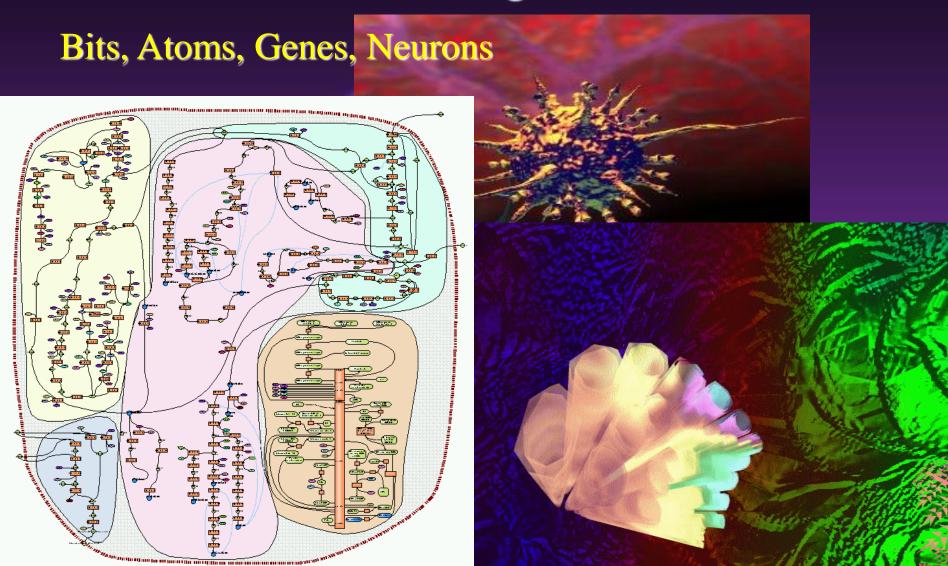

- We as a human species, are adapting, in rapid succession, to a series of evolutionary increments, contrived and accelerated by our own collective efforts, one of the outcomes of which is the "spawning" of evolved hybrid entities, their respective modes of communication, and our adaptation to an operational ecology with which even now we are symbiotically, and irreversibly connected.
- This "intermediate" communication / contextual cognition development stage is a precursory requirement for our ability to effectively communicate with emergent intelligences, entities, and societal systems emanating from this world, and other worlds yet to be encountered.

Primary Vectors of the Emergent Operational Ecology

It is here, at this evolutionary eventhorizon, that we, the human species, evolve into a realm where the interface boundary between the real and the virtual, the organic and the synthetic, become seamlessly infused into an ever evolving symbiosis of our own creation, and what evolves henceforth.

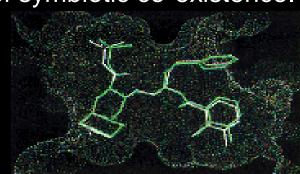

As a process node embedded within the eventstream of our collective socioeconomic, anthropological, and biophysical evolution, we begin first by spawning various synthetic entities. These become synergistically codependant organelle sub-components of an evermore complex, telecommunications centric process brokeraging infrastructure upon which

the economic engines of our current civilization

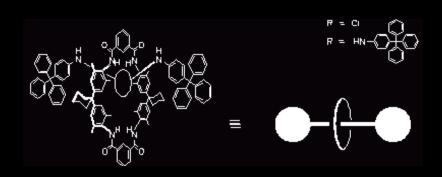

Self organizing networks, process elements, and molecular substructures become the core organelles for synthetic brain engines, which in turn become the "physical" components for enabling synthetic sentience rendering as a process deliverable, enmeshed into a functionality manifold of symbiotic co-existence.

Synthetic brain engines, which themselves are facilitated as nano-manufactured synthetic organelle components, become interconnected into the ubiquitous process brokeraging operational ecology.

The existence manifold of the human inhabitants, enmeshed within the symbiotic tissue substrate of the ubiquitous connectivity grid, is consumated by the implementation of direct interface "process linkage", in which the perception of the real and the virtual become interchangable, and eventually,

imperceivable.

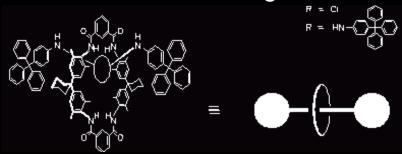

Tangible, hard asset based commodity driven economic systems become supplanted by a virtual asset based economic ecology, in which valuation is measured less by ownership of physical things, more by access to processes. Synthetic sentience, and "tele-existence streaming" for on demand nano-assembly,

become indices of valuation.

Our collective development and deployment of complex metasystems of artificial entities and synthetic lifeforms, and acceptance of such becomes the "culture norm" of the near future. This is in fact the precursory developmental increment, as an evolutionary enabling threshold to communication with

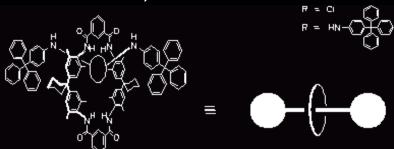

alternative intelligences, virtual and real.

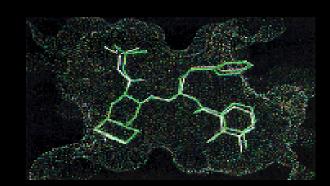

Our collective development and deployment of complex metasystems of artificial entities and synthetic lifeforms, and acceptance of such as the "culture norm" of the near future, is in fact the precursory developmental increment, as an evolutionary enabling threshold, to communicative access to species (virtual or real).

or real), from worlds other than our own.

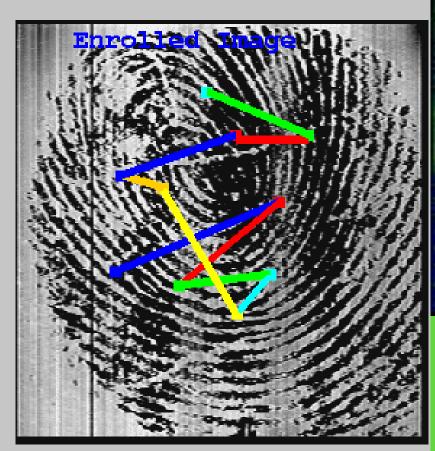

The next evolutionary developmental increment will be access to the quantum realm, as a byproduct of applied nanotechnology. This is the enabling threshold to hybrid forms of consciousness on a mass scale, the evolution of the "empathic web".
