# Probing The History of the Future - Evolution Into the New Millennium

- Technology Convergence
- Cultural Morphology
- Economic Drivers
- Belief Systems

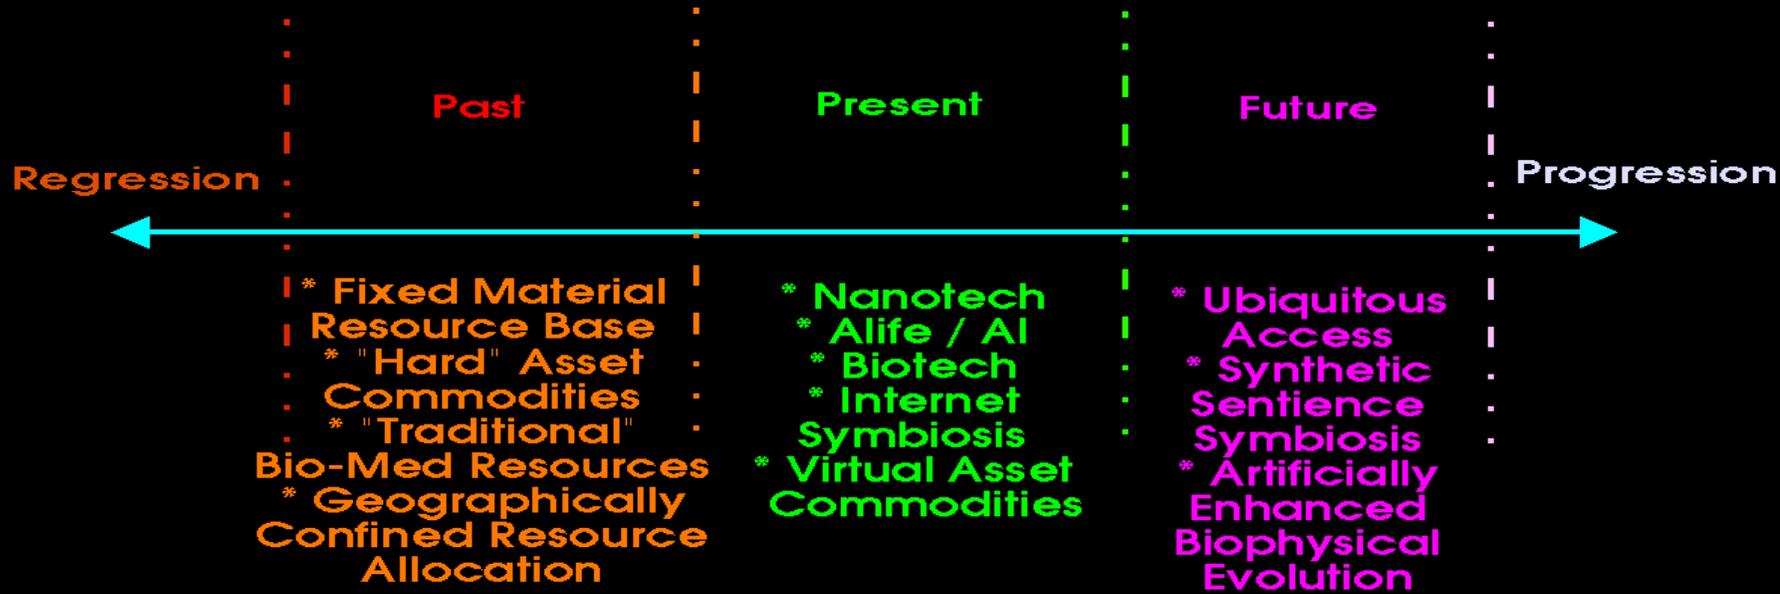

# Evolutionary Process Dynamics

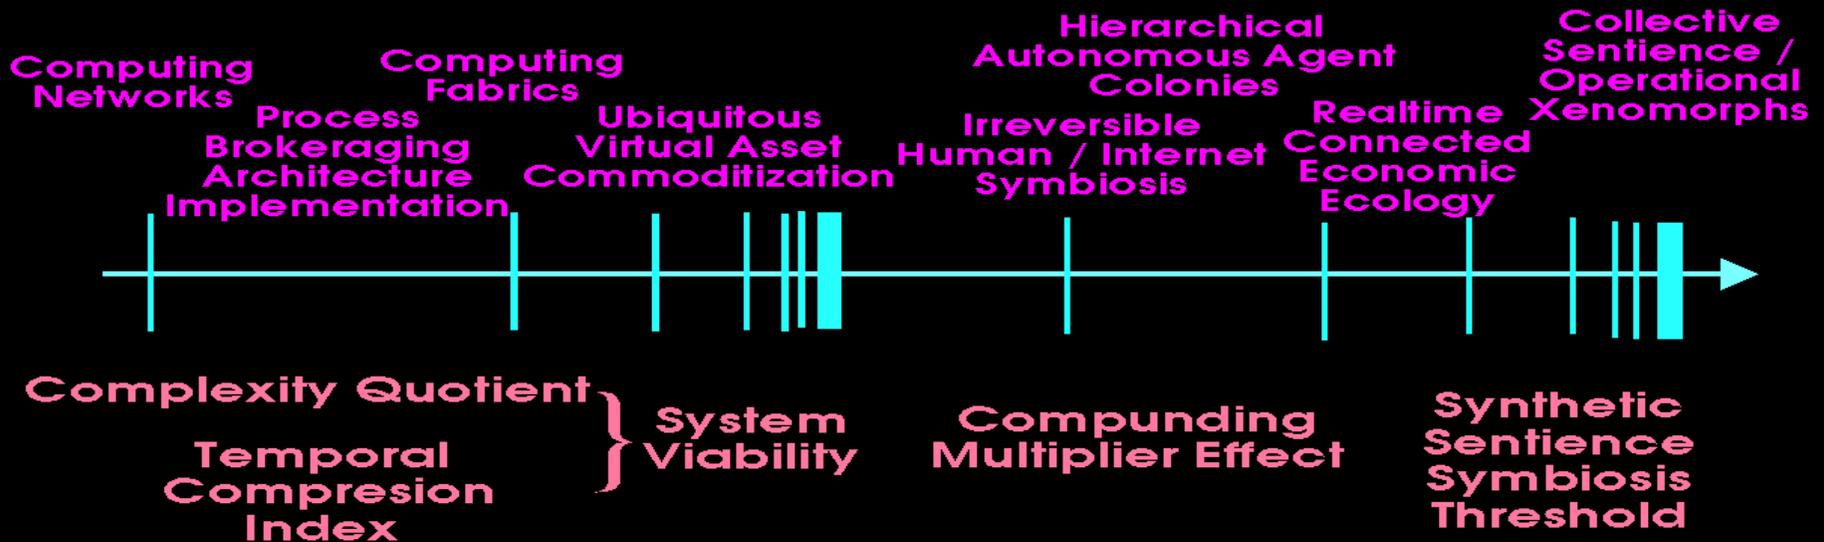

- Evolution tends to be a trauma induced process
- Fractal system model - operates at all scales, from the individual, to the collective, entire systems
- Provided the periodicity and amplitude of trauma cycles do not exceed the system capacity to respond, the system tends to evolve to a more robust form

# Contextual Cognition in the Emergent Operational Ecology > Hyperdimensional Existence Navigation

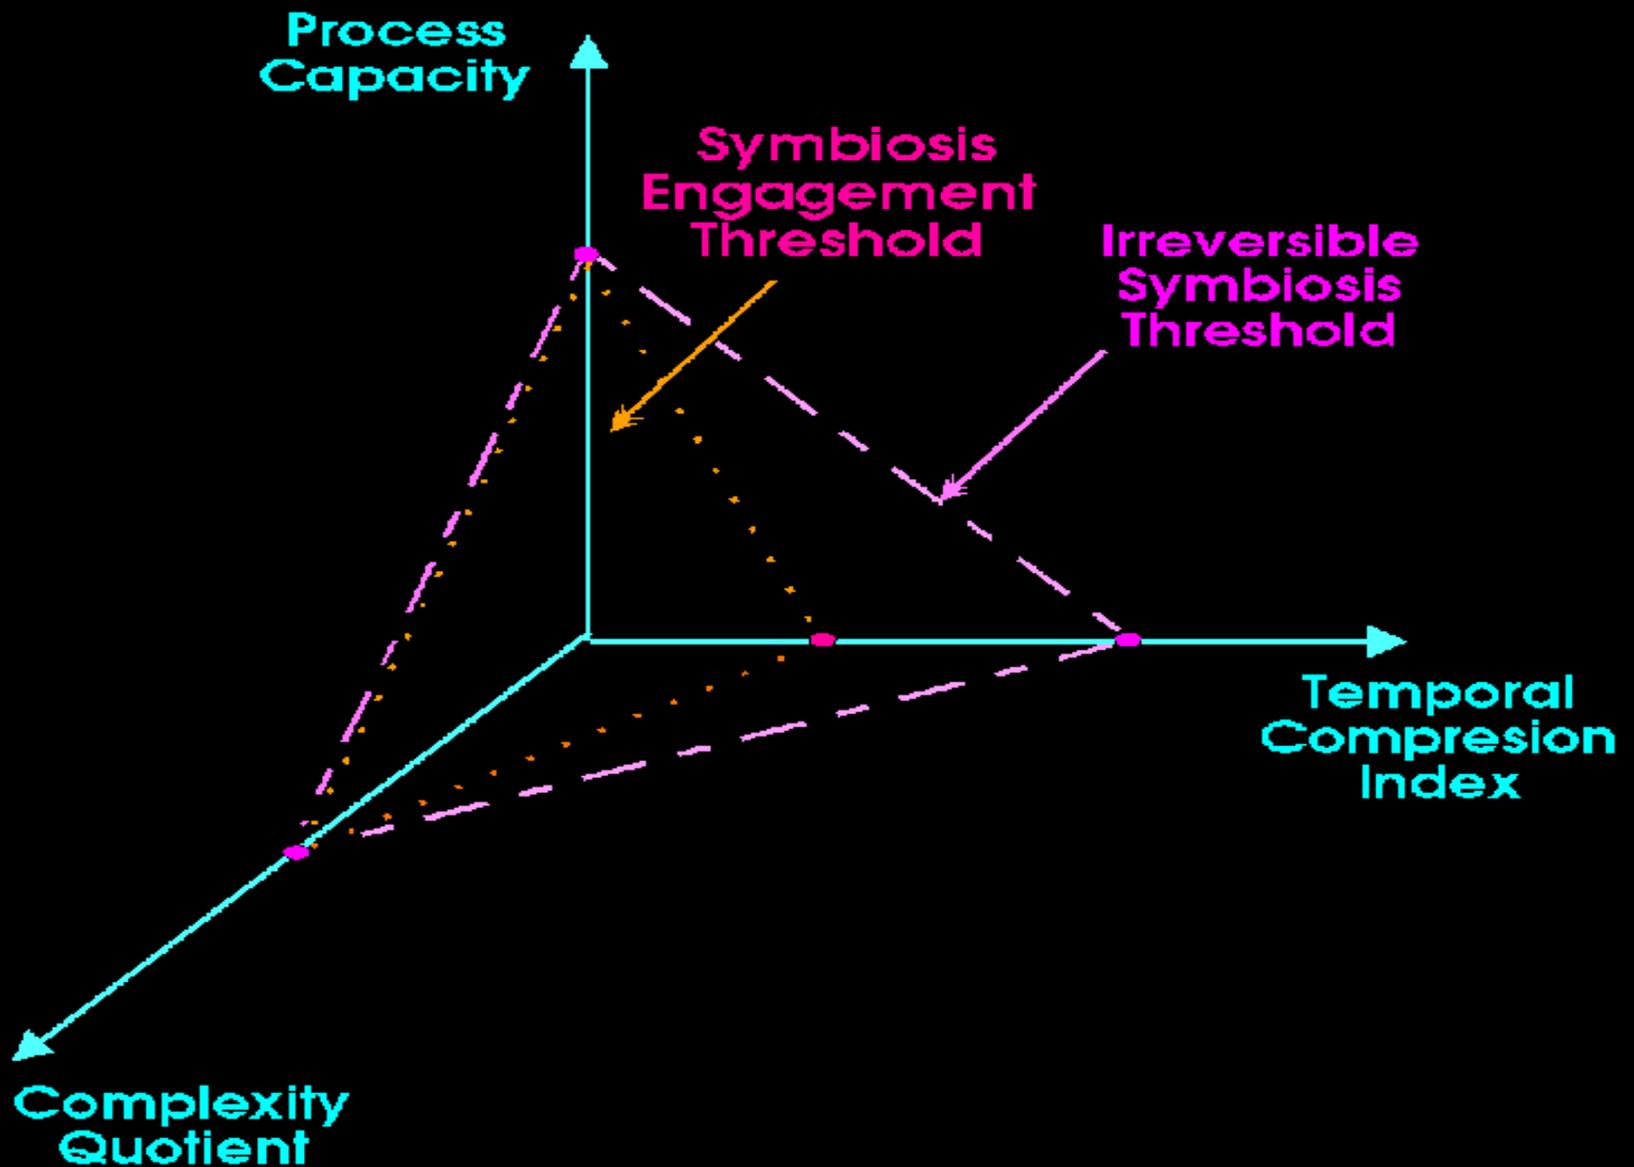

# Cultural Imperatives

- Knowledge complexity, scale, and velocity is exceeding human capacity for mission critical decision rendering compressed into ever shortening time scales.
- The internet is the cultural and functional equivalent of Gutenberg's press, combined with the Library of Alexandria, manifest in a realtime global environment

Integrated biodevices / hybrid organisms / artificial entities

# Processes dynamics of evolutionary system failure vs. “Armageddon” trauma singularity

Evolutionary system failure is the exact inverse of an Armageddon meteor impact event

- Problem space to solution space interface boundary is highly perturbed
- Many to many problem space driver - perceived threat vectors are contextually interlinked, nonlinear interdependancies

# Current processes by which the current life support capacity of the biosphere may be suppressed into eventual system level failure mode

---

- Highly centralized, megalithic, predatory manufacturing and industrial processes, energy systems
- Acceleration in consumption of non-renewable resources
- Irreversible alterations to ecosystems, soil, oceans, atmosphere
- Increased dispensation of hazardous materials, pathogens, mutagens
- Situational dysfunction of societies, socio-economic systems and substrates
- Highly centralized, hard asset based commodity systems decaying into irrecoverable debt vortices

# Resources and processes currently existing, or in various stages of development

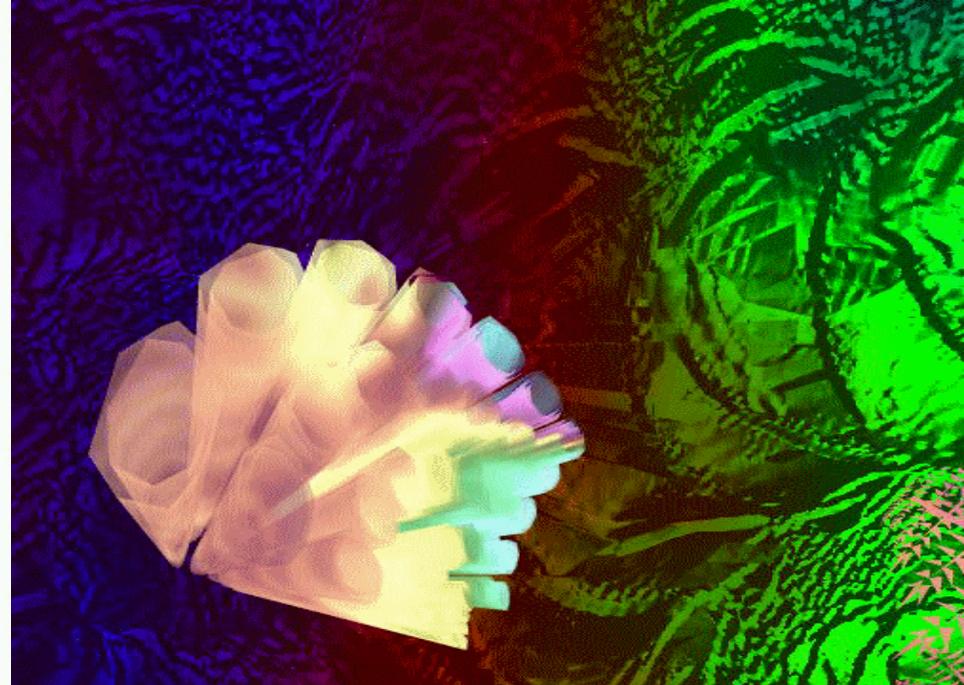

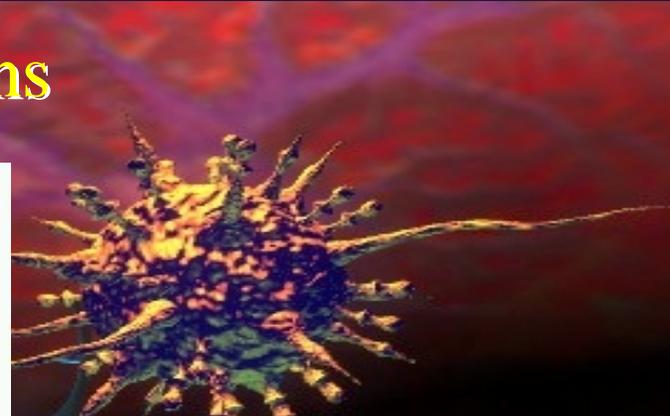

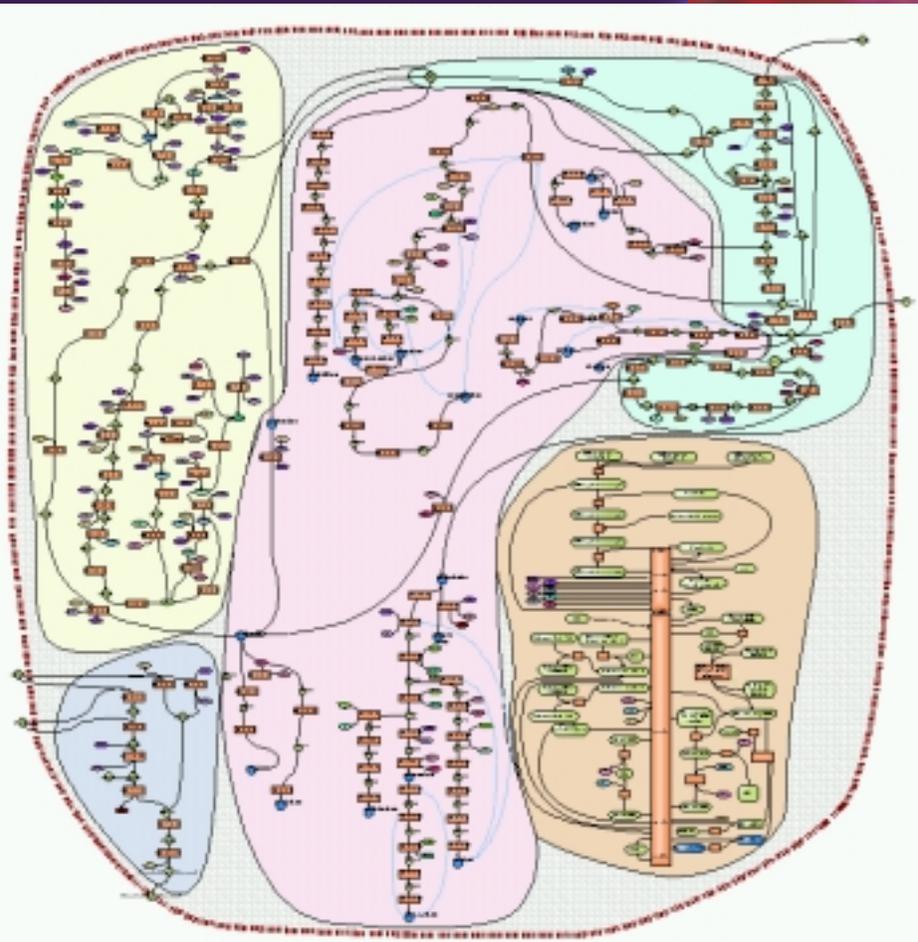

---

- "Manufactured" synthetic life forms, pseudomorphs, quasi-organic entities
- Distributed, granular manufacturing systems, energy systems, via applied nanotechnology
- Accelerated evolution - cybernetic and genetic modification of the human body
- Synthetic sentience as a strategic resource
- Infinitely scalable computational resource
- Mind/machine interface

	Bilayer Type	Main needs for structural integrity	Typical signal generated
↑ Complexity hierarchy ↓	End of Organ (eg. Olfactory)	Intact Tissue Architecture	Action potential
	Tissue	Nutrient / Oxygen Supply	Metabolic end product
	Whole Cell		
	Cell Organelle (eg. Mitochondrion)	Osmotic / pH Stability	Product of electron chain
	Biomembrane (eg. Receptor)	Mechanic protection	Released contents
	Enzyme	pH / electrolyte stability	Reaction product
	Antibody	pH stability	Antigen uptake mass change
	Ionophore	Adequate retention	EMF/absorbance change (chromionphore)

# Convergence Syndrome Outcome

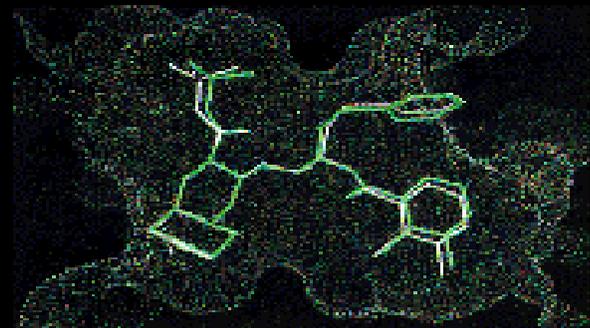

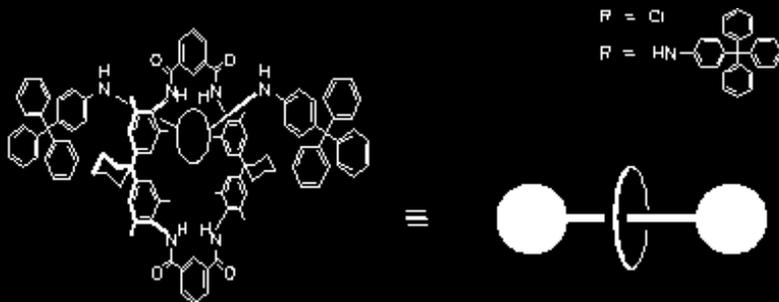

- As a process node embedded within the eventstream of our collective socio-economic, anthropological, and biophysical evolution, we begin first by spawning various synthetic entities. These become synergistically co-dependant organelle sub-components of an evermore complex, telecommunications centric process brokeraging infrastructure upon which the economic engines of our current civilization

# Convergence Syndrome Outcome

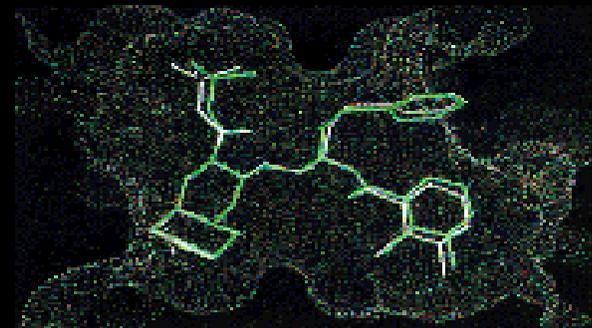

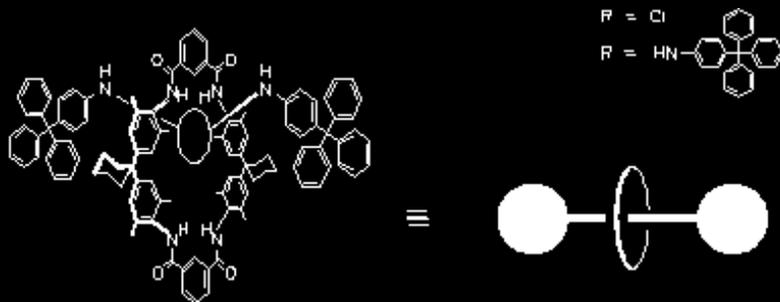

- Self organizing networks, process elements, and molecular substructures become the core organelles for synthetic brain engines, which in turn become the “physical” components for enabling synthetic sentience rendering as a process deliverable, enmeshed into a functionality matrix of symbiotic co-existence.

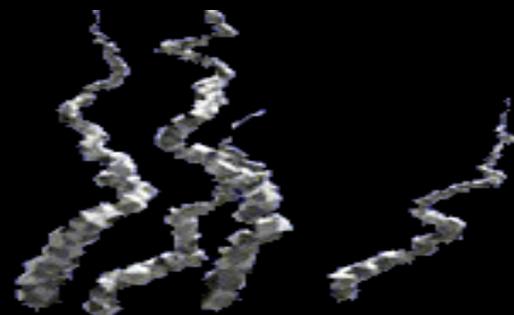

# Convergence Syndrome Outcome

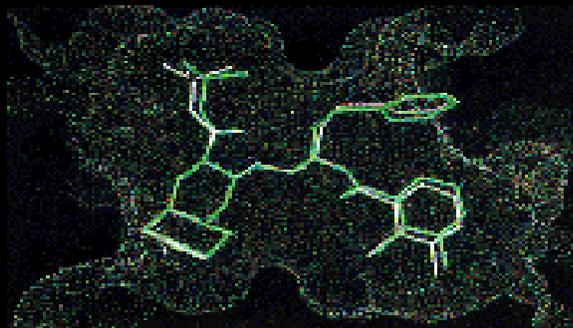

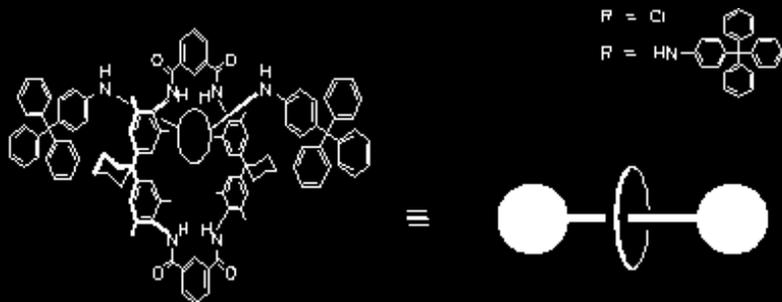

- Synthetic brain engines, which themselves are facilitated as nano-manufactured synthetic organelle components, become interconnected into the ubiquitous process brokeraging operational ecology.

# Convergence Syndrome Outcome

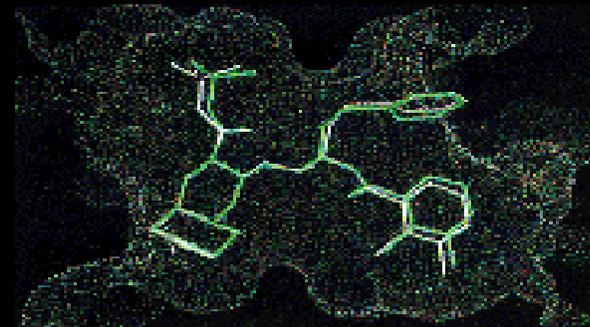

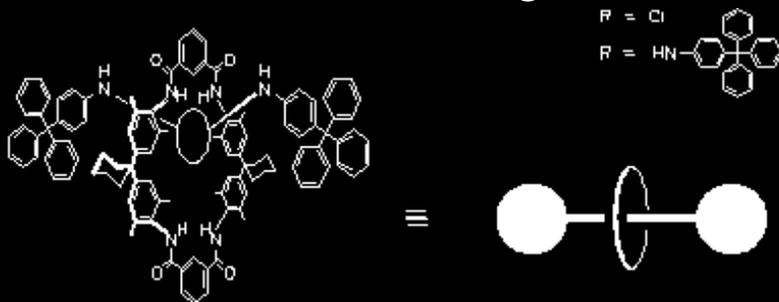

- Tangible, hard asset based commodity driven economic systems become supplanted by a virtual asset based economic ecology, in which valuation is measured less by ownership of physical things, more by access to processes. Synthetic sentience, and “tele-existence streaming” for on demand nano-assembly, become indices of valuation.

# Convergence Syndrome Outcome

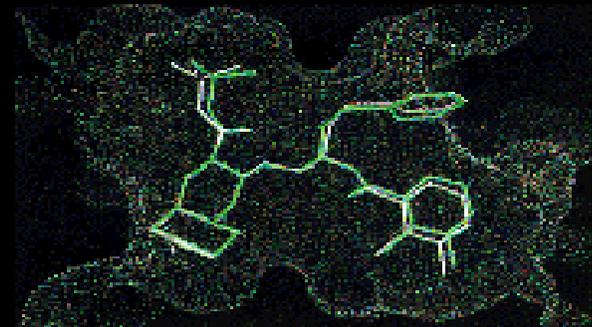

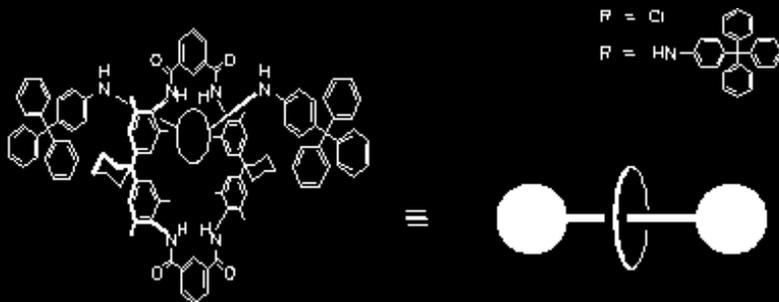

- Our collective development and deployment of complex metasystems of artificial entities and synthetic lifeforms, and acceptance of such becomes the “culture norm” of the near future. This is in fact the precursory developmental increment, as an evolutionary enabling threshold to communication with alternative intelligences, virtual and real.

# Convergence Syndrome Outcome

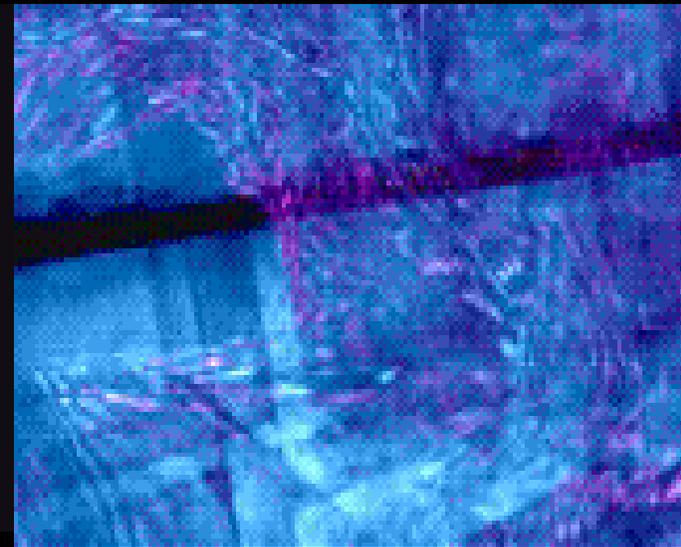

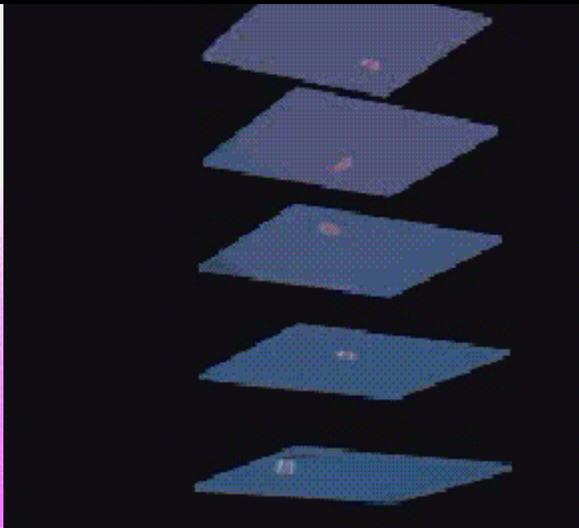

- The next evolutionary developmental increment will be access to the quantum realm, as a byproduct of applied nanotechnology. This is the enabling threshold to hybrid forms of consciousness on a mass scale, the evolution of the “empathic web”.
